

Prospect and Customer Profiles

Responses to Toheed's development questions

From: Kyle Stafford To: Toheed and Lute Atieh September 23, 2026

1. Square, callbacks, reviews, surveys and printed letters

These are not primary items for the current profile work and do not need to be built in this phase.

- **Credit cards:** We want the ability to accept credit cards, probably through Square. The processor is not finalized.
- **Surveys and printed letters:** We may want to send surveys and create letters that can be printed. These can come later.

I am not sure which specific walkthrough features you mean by "Square cards," callbacks and reviews. Please clarify those references. They should not hold up the basic profile work.

2. Gate Code, Access Notes and sensitive information

Remove Gate Code and Access Notes as built-in fields entirely, not just from the property form.

That also means removing their dedicated display from assigned jobs. Do not include built-in fields, prompts or examples that suggest users should collect or store gate codes, credit-card details or similar sensitive information.

By users, I mean the business owner, operator, office staff or technician using Corstead. I do not want us encouraging that collection, particularly given my liability concerns.

Users can still create their own custom fields. If a company chooses to create a field for that information, it is their choice, not something Corstead should prompt or recommend. This is separate from accepting card payments through a payment processor.

3. Deleting profiles, jobs and estimates

The full-profile Delete button should work even when jobs or invoices are attached. It is not limited to empty profiles.

Allow users to delete individual jobs and estimates/quotes from their respective sections on the profile.

If an authorized user deletes the entire prospect or customer profile, permanently erase that profile and everything belonging to it, including jobs, estimates/quotes, invoices, related payment records, notes and history. This means deletion, not archiving.

4. Address autocomplete account and cost

Lute can answer whose account should own the API key and handle the monthly billing.

We should also check the expected cost before committing to a provider. Address autocomplete is still desired, but account ownership, billing and cost need to be clear first.

5. Sub-customers and parent billing

We only need to link profiles. We do not need a "bill to parent" feature.

Let any profile be linked beneath a main profile, with one or multiple sub-customer profiles underneath it. This should work for both residential and commercial accounts.

The relationship could be a family member, a separately tracked property, another business location or another related account. The system does not need special rules based on that relationship.

This is for organizing profiles together. Do not build combined invoices or automatic parent billing for this scope. Linking the profiles should not change how they are billed.

Sub-customers remain a desired feature, but they can be added in the near future if there is not time to address them now. They should not delay getting the basic profiles working.

6. Custom field types

Let the user choose the field type when creating a custom field.

Offer text, number, date, dropdown and checkbox. The user should be able to create and name the field directly from the profile. For dropdowns, let the user create and manage the available choices.

7. Priority and build order

Get the Prospect and Customer profiles working first, then move to the remaining calendar work.

The basics need to be functional, organized and set up the way we want. This does not mean every advanced profile feature has to be finished before returning to the calendar.

Use the existing work you identified and finish making it available in the profile workflow: named contacts with multiple phone numbers and emails, billing/estimate contact purposes, multiple service addresses with a main address, customizable dropdowns, the service catalog, the Communication & Activity tab, and estimate statuses.

Please build the phased plan around that order. The smaller profile edits can move ahead first; once the core profiles are ironed out, move on to the remaining calendar work.
